Summary

The Information Technology Developer and Data Analyst is a critical contributor at the growth stage of the company. For an experienced full stack web developer or mobile app developer with a track record of working independently and delivering quality results, this is an opportunity to consistently drive the information systems initiatives at the company towards long term growth objectives.

Responsibilities

You will be responsible for supporting critical services and developing solutions to maintain and improve our information infrastructure and data flow for scalability, to promote technology adoption among staff, and to support individual productivity for all employees:

- Continuously improve data analysis capabilities by working with business leaders to specify and improve our data platforms
- Develop new initiatives such as internal and external mobile apps and integrations, knowledge management systems
- Build an app from idea to product launch
- Work with marketing team to design UI/UX
- Ensure performance and quality of apps.
- Test and fix bugs.
- Build and maintain cross platform mobile applications

Education & Qualifications

- 2-3 years of mobile and/or web app development experience.
- Familiarity with web-ready languages such as php and python, and experience working with platforms such as code-igniter and Laravel;
- Experience with version control system such as Git
- Familiarity with APIs to connect to back-end services
- Experience working with mobile money operators - preferred

Outlook:

- Highly organized and process-oriented;
- Interested in taking primary responsibility of outcomes;
- High integrity and a sense of fairness
- Experience with cloud services such as AWS or Google cloud preferred
- Experience with data analysis using BI platforms preferred
