Summary

This position involves working closely with the production team to oversee the formulation process, conduct quality control tests, and ensure that all admixtures produced meet the quality standards.

Responsibilities

Relationship Management

- Working with the technical team and providing needed support to ensure the machines are maintained and problems fixed for optimal production capacity.
- Work with the Production team to adjust formulations or processes as needed to maintain quality.
- Acting as a backup for the plant engineer officer when needed.

Task Management

- Monitor the production process to ensure consistency and adherence to specifications.
- Record and document all production data, including batch numbers, ingredient quantities, and process conditions.
- Perform routine and non-routine quality control tests in-process samples and finished products.
- Compare test results against specifications to ensure products meet quality standards.
- Calibrate, maintain and troubleshoot laboratory equipment to ensure accuracy and reliability.
- Keep the laboratory clean, organised, and in compliance with safety standards.
- Maintain detailed and accurate records of all laboratory tests and procedures.
- Ensure compliance with all regulatory requirements and company policies.
- Report any safety hazards or incidents to the appropriate personnel.

Education & Qualifications

Certificate or Diploma In Industrial Laboratory, Chemistry or other related field.

Requirements

Minimum of 1 year working experience.

Characteristics

- Proficient in laboratory techniques and the use of standard lab equipment
- Strong analytical and problem-solving skills.
- Attention to detail and ability to work independently.
- Good communication and teamwork skills.
- Knowledge of industry standards and regulatory requirements.
